

# Knee Operated Hands Free Kit

## HFS780

The self-closing knee operated valve is located beneath the basin and when moved with the knee or leg the water flows for approximately 15 seconds, allowing the user to wash hands without having to touch the taps. The knee lever can be operated in any direction to activate water flow.

As it is a mechanical device, the knee operated valve is particularly appropriate in wet or wash down areas including fish and meat processing facilities.

### FEATURES

- 100mm fixed aerated basin outlet
- 500mm flexible connection hose
- 1 mini isolating stop
