

ACTIVE SOFT

Scale reduction system

Xsential's Active Soft XC-800-S scale reduction system uses revolutionary technology to lower the pH level of water, and is based on the scientific process of chelation. Instead of removing calcium like traditional water softeners, Active Soft chelates (binds) and sequesters (isolates) the calcium ions, preventing them from precipitating out and forming scale.

Active Soft reduces or removes issues caused by scale build up in various appliances including hot water systems and dishwashers, reduces staining on shower screens, plumbing fittings and more. For commercial or residential use.

Dimension: 460mm (H) x 90mm (Dia)
Max Temp: 38°C - Cold water connection
Max Pressure: 800kPa
Inlet/Outlet Ports: 20mm (3/4 inch)
Replacement Interval: 4 - 6 months

Quick-change cartridge system.
Supplied with wall bracket, head fitting and cartridge
Plus dual check valve
